

## Creating Your First Web

What to think about before creating your web:

- ✧ What type of information do you want to post to the web?
- ✧ What is your audience?
- ✧ How will you structure your web site?
  - Organize your information by main topics and sub-topics if necessary
  - Diagram or flowchart your web site

What is a Home Page?

- ✧ This is where people will start exploring your web site.
- ✧ This is also the address (URL) that you will share with others.
- ✧ It is the starting point of your web site, usually an "introduction" to whatever information you are sharing.

What to think about when designing your web:

- ✧ Think about the web sites you return to again and again.  
Why do you like them?
  - Is it "clean" - not too busy or overly colorful?
  - Is it easy to find the information you want?
  - Are the pages consistent (go to the same place to find certain buttons)?
- ✧ Make sure your graphics and colors **complement** your text, not compete with it.
